

# PLANT VISIT

by a Robin Reporter

“On the eve of World Environment Day 2011, 40 members of the Tata Power Energy Club of Sri Ma Bal Niketan, Thane visited Tata Power’s thermal power plant in Trombay. The children were educated about the power generation process and the need to conserve energy and natural resources. They were also told about their role in spreading this message to society. The children also interacted with the Tata Power team and were given an opportunity to clear their doubts about energy. Some of the questions they raised were, “How is power generated?”, “What are the renewable sources of energy available today?”, “How does climate change affect us?” and “What can we do to conserve energy?”

Both the teachers and students were excited after the visit. Ameya Joshi, a student of Sri Ma Bal Niketan said, “The concept of Energy Club is brilliant.” Mohini Pol, a science teacher from the school said, “The entire presentation was very informative and well executed. We too learnt things we were unaware of. The children will surely spread the word and take steps towards this initiative. More such initiatives should be taken up.”

Vijay Chourey, Head, Trombay Thermal Generation Station, further added, “Tata Power Energy Club is one of our key initiatives on energy conservation and the students were engaged to ensure commitment towards resource conservation.”
